# How to Push Code Changes to GitHub

## ■ If your project is already connected to GitHub:

1. Open a terminal (in your project folder).
2. Run: git status
→ This shows your changes.
3. Add your changes: git add .
4. Commit with a message: git commit -m "your commit message here"
5. Push to GitHub: git push origin main
(Replace 'main' with 'master' if that's your default branch.)

## ■ If your project is new to GitHub:

1. Go to GitHub → create a new repository.

2. Inside your project folder, run:

git init

git add .

git commit -m "first commit"

git branch -M main

git remote add origin https://github.com/your-username/your-repo.git

git push -u origin main
